

## **WASTE REDUCTION COMMITMENT STATEMENT**

Gabungan AQRs Berhad is committed to addressing its production of a wide range of wastes from its construction sites. Hazardous and non-hazardous waste sent to landfills should be reduced through increased recycling efforts at all sites. Where possible, suitable waste will be repurposed for reuse at all construction sites.

Gabungan AQRs Berhad will also have a look at increasing the adoption of more resource efficient building technologies such as pre-cast and Industrial Building Systems (“IBS”). These enable more efficient construction that reduces resource consumption and construction wastes.

Waste can also be addressed by leveraging on intelligent building design systems such as Building Information Modelling (“BIM”) and by adopting innovative designs that require fewer building materials.

Waste shall be disposed only by licensed 3<sup>rd</sup> parties, with such parties providing full accountability on their methods of disposal as well as dump sites / landfills.
