

WATER CONSUMPTION AND INTERACTIONS WITH WATER BODIES COMMITMENT STATEMENT

Gabungan AQRs Berhad is committed to conservatively managing water withdrawn from municipal sources for use at all operational sites. Water is a finite and shared resource and hence must be preserved to ensure continued availability for other stakeholders and for future generations.

At all sites, Gabungan AQRs Berhad is committed to strengthening its 3R philosophy of reduce, reuse and recycle water for non-potable use. Only required amounts are to be withdrawn, with only a small quantity withdrawn and stored (in case of emergencies i.e. disrupted water supply, etc.).

Where possible, in reducing dependence on piped, municipal water, Gabungan AQRs Berhad adopts rainwater harvesting mechanisms to supplement its existing water sources.

We are committed to ensuring that all effluent and silt discharged must be within the parameters set by the Department of Environment and other regulatory authorities.
